

Using our shipping calculator

<h2><p>When you create a listing using the calculated shipping option, we use our shipping calculator to automatically update the shipping charge a buyer sees, based on their location, and the details you provide on your package and delivery service.</p>

</h2>

<h2><h3>With calculated shipping, the buyer's shipping cost is calculated automatically, based on their location and the package's weight and dimensions.</h3>

</h2>

<h2>Here's how to use calculated shipping when listing your items:In the Shipping section of your listing, select Calculated: Cost varies by buyer location.Next to Services, select Calculate Shipping.In Package details in the Shipping Calculator, enter your package type, dimensions, and weight. If you're selling an irregularly shaped item, estimate its dimensions by measuring a box you can fit it in.In the Your details section, enter your ZIP code and any handling fees.You can add a destination if you'd like. If you're shipping internationally, we recommend using eBay International Shipping.Select Calculate shipping.Select the shipping services you want to offer, and drag them into the order you want buyers to see them.Select Offer shipping services.Complete your listing.Tip You can also use the shipping calculator - opens in new window or tab before creating your listing, to research what it might cost to send your item to different locations.
