

PI - Electronic equipment policy - Prohibited and Restricted Items

GUIDE.SUMMARY To comply with U.S. Federal Communications Commission (FCC) regulations and to protect the safety and privacy of our members, there are restrictions around the sale of electrical and electronic equipment. What is the policy?

The following types of electronic equipment are not allowed:

- Electronic items prohibited by government agencies, including cell phone, GPS radar, and other signal jamming devices. See the [FCC's jammer enforcement](https://www.fcc.gov/general/jammer-enforcement) - opens in new window or tab for more
- Traffic light control devices
- CB amplifiers and radio equipment that operates in both CB and HAM frequencies
- Odometer modification devices
- Equipment such as low power transmitting devices, high frequency transceivers, cordless telephones and radar detectors not authorized by the FCC
- Appliances for sale in California that do not meet applicable efficiency standards
- Surveillance items that are intended to photograph, or record the conversations or activities of others without their knowledge

Why does eBay have this policy? In order to comply with government regulations and help prevent privacy violations, we don't allow the sale of certain electronic items on eBay.

GUIDE.TALKING_POINTS Dual-use transceiver / receiver

- The FCC General Council has concluded that dual-use CB and amateur radios may not be approved under the Commission's rules and are in violation of several rules, including the RF power level limits of 47 CFR 95.639. Such transceivers can be amplified to exceed 4 watts using the AM settings or 12 watts using the SSB settings, which is specifically prohibited by our policy due to FCC regulations.
- Emergency locator beacon
- EPIRBs that operate on the 121.5 MHz frequency are prohibited under

target="_blank">federal law. 406 MHz locator beacons are the standard now. If your item operates on this frequency, you need to indicate such in your listing. Power amplifier An amplifier that is determined to operate in the 11-meter band is specifically prohibited due to FCC regulations. Transceiver A transceiver that is determined to be amplified to exceed 4 watts using the AM settings or 12 watts using the SSB settings is specifically prohibited due to FCC regulations. Deeper why of policy eBay urges its sellers and buyers to comply with all governmental laws and regulations. Because the sale of certain electronic equipment has been deemed unlawful by the Federal Communications Commission, sellers may not list them on eBay. Several states (including California) prohibit the use of photographic devices to surreptitiously view or record individuals for sexual purposes. Listings that promote such activity are not permitted on eBay. </h2>
